The RAW software for Windows makes use of sophisticated A.I. and advanced rendering features that get rid of the "airbrush" look that has plagued the Nik Collection software. The RAW converter is an even more user-friendly application than before, with a simplified interface and a streamlined user experience. Whether that means combining Photoshop Creative Cloud and TIP into a powerful web design platform for designers on the go, or creating a mobile-first workspace that ties together your love of photography and your editing tools. Adobe announced late last year on its Behance site that the next version of Photoshop Elements would feature the ability to make cloth simulation edits without any need for plug-ins. The update is now approaching and is set to debut later this year. Adobe is working on a new feature that could become very interesting. For that to become a reality, it needs to adapt to advances in artificial intelligence including that of artificial neural networks or neural networks. The new feature being developed by Adobe will allow for a completely new way of looking at the process used to create images. The new AI technique works by allowing a user to, by applying different filters to an image, allow a machine to learn about the type of actor in the image, or the emotion or feeling, and then providing an overall result of its significance. A good example would be using a filter called “Smooth” that would allow an AI to note what kind of face that is and then modify its results accordingly. Photoshop has long offered the Content-Aware Patch or Fill feature to users. This feature was primarily used in conjunction with the Content-Aware Crop. However, the Content-Aware tool, which we’ve covered extensively before, has become quite powerful and now users can even use it to affect an object in a separate layer. Let’s say you created a complex image using layers and a Content-Aware Crop only to find you no longer want the layer you just cropped and want to gradually remove it from the image and allow the portion in which you cropped it to remain.
